

Spring 2008

New Product Announcement

Mixol's new **Metallic Effect Concentrates** create a wide variety of gold, silver or copper effects ranging from a light shimmering glitter to an opaque metallic-like surface. These water-based tinting pastes contain a high portion of bronze, aluminum and pearlescent pigments. They may be added to transparent coatings to create a decorative finish or glaze. The full range of 33 Mixol Universal Tints may be combined with Metallic Effect Concentrates to create an infinite color palette and a variety of special effects.
